

## How to use WP\_2.7+ Extension for Dreamweaver

(Version 0.9.0, October 26, 2009)

This extension for Dreamweaver CS3 and above inserts Template Tags (PHP-Code) used in WordPress 2.7 and above for creating your own WordPress Theme. It also includes wizards for Header-Tags and The Loop for index.php, single.php & page.php.

Place the cursor (in Design View or in Code View) where you want to add the special WordPress Template Tag to your file. Then choose a symbol in WP\_27+ Tool Bar.

**Note:** For inserting WordPress Header-Tags select DOCTYPE to </head> in Code View first, then use . This will overwrite the whole HTML-Header created by Dreamweaver.
